FERMIN CASILLAS

Computer Systems Engineer

PROFILE

Computer Systems Engineer with focus on Web development. Experience programming in frameworks such as Angular, NestJS, and developing API services with GraphQL and much more.

As a person, I'm always trying to find the way to be a better Software Developer and improve my programming skills and learn new software trends. Another thought that I have is working as a team is one of the best things that people can do, because there are things that you don't learn alone and the support as team mates is worth.

If there is something that I don't know I can easily learn it from scratch. If there is an opportunity to be part of your company I will do my best to do a great work and I am always ready to face new challenges.
